Kreol: a description of Mauritian Creole

The language situation in Mauritius with special reference to Mauritian Creole
An agglutinative language is a language that uses agglutination extensively: most words are formed by joining morphemes together. This term was introduced by Wilhelm von Humboldt in 1836 to classify languages from a morphological point of view. Additionally, and most importantly, in an agglutinative language affixes do not become fused with others, and do not change form conditioned by others.
